

About us

The Pinta family began its pig-breeding activity in 1960 and, in a very short time, became a point of reference in the swine sector, thanks also to the investments made in modern and eco-sustainable facilities. In the early 2000s, as a result of the experience acquired, they decided to build a highly technological feed mill and to concentrate their efforts on the production of high quality pig feedstuff.

Today our FEED becomes ACTIVE

Each nutrient represents a dynamic constituent, the modulation of which makes it functional to each specific problem.

**STUDY, RESEARCH
AND COOPERATION WITH
INTERNATIONAL EXPERTS**

**RATIONAL AND TARGETED
FORMULATIONS**

**ACTIVE NUTRIENTS TO PREVENT
AND SOLVE FARMING PROBLEMS**

**FUNCTIONALITY IN HEALTH
AND MANAGEMENT ISSUES**

**FOCUS ON ENTERIC
AND REPRODUCTIVE DISORDERS
AND TECHNOPATHIES**

*Special thanks to EW NUTRITION
for the unique collaboration
in the study and development
of this new concrete vision
in swine feeding.*

ACTIVE FEEDING Nutrition and beyond

ACTIVE FEEDING

Nutrition and beyond

Feeding accounts for
about 60% of the swine production total costs.

It has the function of feeding animals while respecting their biological needs and promoting their performance, be it related to growth or reproduction, in accordance with their genetic potential.

It must be healthy, fresh, palatable, nutritious and specific in relation to the production stage.

FP MANGIMI has always expressed and enhanced these prerogatives with quality raw materials, daily production, tasty diets promoting high feed efficiency.

FP MANGIMI HAS DEVELOPED FURTHER THE VALUE OF FEEDING.

*The intuition of being able to go beyond the natural nourishing function **has generated the concept of “active feeding”.***

Each nutrient represents an active constituent and its modulation makes it functional to the specific problem to be addressed.

*The simultaneous use of specific additives of natural origin confers to **ACTIVE FEED** as well as anti-inflammatory, antimicrobial, immunostimulant and detoxifying properties essential for the maintenance of the pig health homeostasis, as well as being determinant in rebalancing the same.*

Join the action, join FP MANGIMI active feeding. Your pigs will be healthy and your herd in balance

Specific **ACTIVE FEED** will be of real help in resolving and preventing situations such as the following, **without or significantly reducing the use of drugs**

- Post-weaning and growing enteritis
- Nervous syndromes in the nursery
- Insufficient growth in the nursery
- Necrosis and ear biting
- Tail biting
- Aggression
- Gastric ulcers
- Abdominal twisting of stomach and intestines
- Slow farrowing
- Poor colostrum and milk production
- Lack of oestrus after weaning
- Poor boar semen quality
- Poor reproductive data
- Rectal prolapses
- Bush foot
- And more

By virtue of the specialization and experience acquired, FP MANGIMI will always be at your side to ensure that the healthiness and productivity of your animals are a source of satisfaction and recognition for the work you are doing.
